URBAN RACKS

INNOVATIVE | BICYCLE PARKING

■ ■ FEATURES AND BENEFITS

No need to struggle to lift your bike up several feet to get onto a vertical parking rack.

With *CycleLift*[™], all you do is lift your front wheel up a few inches and place it on the green knob.

The *CycleLift*[™] will now help you lift the bike into place - you can even guide it with just one hand.

Leave it as is, or you can further optimize your space by pushing the bike to the left or to the right, and against the wall. Your choice.

■ ■ SPECIFICATIONS

- 3.0" (7.5cm) wide
- 36" (91.5 cm) height

You will need a ceiling height of no less than 96" (210cm) to ensure your *CycleLift*[™] can operate properly.

If you are installing more than one *CycleLift*[™] side by side, you will need a minimum distance of 12" (30 cm), in between each unit and any side walls. Please note that we recommend 16" (40 cm), depending on the size of your handlebars.

The ability for the *CycleLift*[™] to swing side to side on the wall will ensure you have enough room to park your bike.

The logo for CycleLift features the word "Cycle" in a black, sans-serif font, followed by "Lift" in a green, sans-serif font. A small blue sphere is positioned above the letter "i" in "Lift". A trademark symbol (TM) is located at the top right of the logo.

Enjoy parking your bike as much as riding it!

CycleLift[™] is an innovative and easy way to park, access and store your bicycle.

Use it for street, mountain, electric bikes and more!
